

Create efficiencies, reduce risks and increase margins with Praguna Fork Lift Training in association with RTITB

CREATE EFFICIENCIES

- Operators are trained to get it right first time
- Operators are trained to be accurate, reducing task repetition
- Reduction in lost operating time because of incidents
- Improve teamwork through operator competence and confidence
- Reduce staff turnover through improved management and operator communication
- Improve operator attitude and responsibility
- Improve fork lift battery life by reducing hydraulic and steering usage

A company in the UK, moving 1.45 million cases a week, has had zero lost time incidents in the last 3 years. All fork lift operators on the site are trained to RTITB standards.

A worldwide pharmaceutical company was experiencing significant battery life issues. The batteries were not lasting full shifts. This meant that they needed to be put on charge before the end of the shift, leaving the fork lift truck unusable. It was identified that this was due to overuse of the hydraulic and steering controls. Following RTITB training, hydraulic and steering usage were significantly reduced and the batteries were able to last a full shift.

REDUCE RISK

- Reduction in accidents/injuries
- In the event of an investigation following a fatality, you will have documentary evidence to prove training has been delivered to a good standard
- Praguna Fork Lift Training is independently verified by RTITB as being delivered to International Standards

A UK company with 500 employees and 316 operators has experienced NO injuries or accidents in the last 3 years.

A cold stores company in the UK require their operators to work in -30°C conditions. In this extreme environment the company were experiencing significant pallet, fork lift and racking damage issues. High levels of product wastage caused by operator error was also a problem. Operators were also dropping the products on the floor and causing physical damage to the building. Following an RTITB training programme the damage costs were reduced and staff turnover was also reduced because operators felt their issues were being understood and addressed by managers. This resulted in reduced training costs.

INCREASE MARGINS

- Less pallet damage
- Less racking damage
- Less lift truck damage
- Less product wastage
- Less infrastructure damage
- Reduce insurance premiums

A UK company had made several significant insurance claims due to fork lift incidents and accidents. This had led to their annual insurance premium increasing by over 80%. By implementing a robust change management programme that was supported by RTITB fork lift training and RTITB manager & supervisor training, the company was able to negotiate a significant reduction in their annual premium.
